Best CallRecorder

This is a fully customizable call recording application with rules for saving conversations for incoming/outgoing calls from known/unknown numbers. Unobtrusive and easy to use.

How to start:

- To have Best CallRecorder saving only those phone conversations you need, select Rules command from menu and set the rules according to your requirements;
- Open settings and customize the options you need;
- Activate Best CallRecorder by Joystick click;

Features

- Automatic recording of voice calls, optionally limited or unlimited by time;
- User defined storage memory for recorded conversations;
- Configurable auto-start function;
- Custom rules allowing to automate call recording for different phone numbers and call directions;
- Small memory and battery usage;
- Easy-to-use and intuitive user interface;

Records view

The records view of Best CallRecorder shows all phone conversation records. Here you can listen to those records, delete them and get detailed information about a record. The list of operations with records is as follows:

- Play a record. While playing a record, you can change the volume with joystick left/right moves;
- Call a contact or a phone number. If the highlighted record has a phone number associated with it, you can dial it even without exiting Best CallRecorder - just press the Call button or select this command from menu;
- Properties - displays a dialog with detailed information about the record;
- Send - allows sending selected records via Bluetooth, E-Mail etc;
- Delete (hot key: 'C') - deletes the marked records;
- Delete all;
- Pack - deletes all records from the list which don't have a sound file associated with it (e.g. if it was manually deleted);
- Refresh - reloads the list of records;

Record rules

Best CallRecorder allows creating the rules of following types:

- - Default - this rule will be put into action if none of the active rules is used;
- - Unknown - if caller's number is not in your Contacts, this rule will be used;
- - Contact - you can set a separate rule for a specific contact;
- - Group - a rule for a group of contacts;
- - Phone - a rule for a phone number. You can use a mask for phone numbers. A match pattern can contain wildcard characters "*" and "?", where "*" matches zero or more consecutive occurrences of any character and "?" matches a single occurrence of any character.

Example:

'*111' - all numbers ending with 111;

'111*' - all numbers beginning with 111;

'12?34' - all numbers like 12034, 12134 ... 12934;

Each rule can have the following actions set to perform when the rule is matched:

- Ask before record - if this action is selected, Best CallRecorder will ask you whether to record a phone call or not;
- Record incoming calls - enable recording incoming calls;
- Record outgoing calls - enable recording outgoing calls;

Note: If you haven't chosen any action or have chosen only Ask before record, this rule will be disabled.

Rules application priority (in case you have any conflicting or overlapping rules):

- Unknown;
- Contact;
- Group;
- Phone;
- Default.

Settings

In this dialog you can configure the following settings:

- Activate (Turn on / turn off)
- Record format (amr / wav)
- Records memory (Phone memory / Memory card)
- Max record time (unlimited / MM:SS)
- Name format (First Last name / Last First name)
