

BestTimer is a handy software for setting different kinds of timers. Easy-to-use and intuitive interface, Pizza timers, 'Remind me in' timers, and stopwatch with 3 modes. Your girlfriend says she'll be ready in 2 minutes? Just check it :)

Application consists of 2 views - Timers view and Stopwatch. You can switch between them with left and right keys.

### Timers view

In this view you can add any number of custom timers. You can set timer name, time to count down, a signal to be played when the time is over and its volume .

You may create any count down timers - Pizza timers, some timer to notify you to call back your boss in one hour, etc

You can start several timers at the same time and they will run simultaneously.

When the time comes a predefined sound is played and the timer window alarm is shown.

You can arrange timers in this view using Move up/down commands from menu or use shift+up/down keys for it.

### Stopwatch

Want to check how much time some action can take? Stopwatch allows you to measure elapsed time. Pausing functionality, ability to snap time at any moment (split time feature), multiple lap time, and much more.

*Value your time with BestTimer*
